Prospector Readers

Among the things planted at the
government experimental station at
Sacoan this spring is a valuable
species of Australian salt brush, known
as Atriplex Semi-baccata, which is an
alkali resistant and flourishes in salt
flats. The bulletins issued by the
Agricultural department state that
this plant will produce five tons of
hay to the acre. Seed planted last
fall has germinated well and it is
hoped that this plant may replace
the growth of salt grass covering the
alkalized area. If this can be done,
it will provide much needed pasture
for a large number of Indian cattle.

At Tucson, the demurrer of the
Arizona Parral Mining company in
the Albert W Forbes against it for

on the sale of the San Xavier mine.
He was represented by E S Ives, the

In the Gardner trial, for criminal
libel, in the district court at Solomou-
ville the jury returned a verdict of
guilty. On Monday, sentence was

of the El Paso & Southwestern rail-
road, is in Douglas to organize the
safety committee of the western divi-

a great deal of good and asked for the
co-operation of the employees, be-
lieving that a large percentage of ac-
cidents can be avoided if the proper
care is taken.

they were in more than a foot, and
were compelled to return--Guardian.

Dr A H Wilde, president of the

on the political situation in Mexico,
and intimated that Sonora would be-
come a part of the United States at
some future date, after the manner of
Texas, when that state declared itself
free from the Mexican government
and asked for admission to the union.
